

What is SILIFORCE HORSES ® ?

SILIFORCE HORSES ® is a unique formulation of 3 essential mineral compounds, combined in a bio-available form.

These mineral compounds are:

- SILICON
- SELENIUM
- ZINC

Dosage :

Siliforce ® should be fed at a rate of 0.5 ml per 100 kg (220 Lbs) of body weight per day. An initial loading dose of 1 ml per 100 kg (220Lbs) should be fed for the first 30 days.

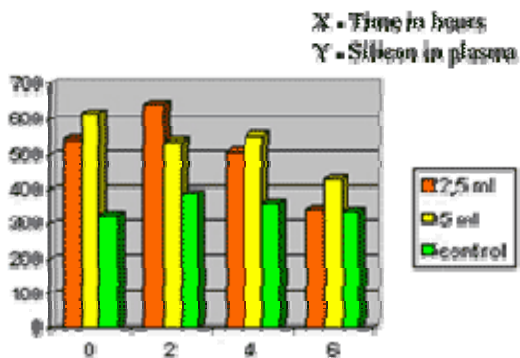

If horse has sustained an injury, maintain dosage at 1 ml /100 kg (220 Lbs) per day.

Siliforce can be mixed with ½ cup water and top dressed into regular food or mixed in the drinking water if horse will drink all of the water.

Advantages SILIFORCE HORSES ® :

- 100% bio-available food supplement
- low dosing: 2,5 - 5 ml per horse per day
- does not contain any heavy metals
- no unpleasant taste
- can be applied by the drinking water
- can be applied by mixing with food
- compatible with all type of traditional food and food supplements

Beneficial effects :

Silicon has beneficial effects on bone quality and improves the mineralization process in the bones.

Silicon acts as a regulator for calcium and phosphorous uptake and will directly contribute to a healthy bone cortex and a well-calcified bone matrix.

Silicon also plays an important role in the formation of connective tissue and collagen (bones, cartilages, ligaments, tendons, hairs, skin and hooves).

Selenium is essential for the immune system and also acts as a strong anti-oxidant.

Zinc is required as a cofactor during the production of new bone.

Scientific research has proven that adding these minerals to a daily diet improves the natural resistance of horses that horses will suffer less diseases, bone-related injuries and connective tissue injuries.

First effects visible after 4 / 6 weeks of utilisation.
